Customer-centric

is our Company's value since the very beginning.

It is the key driver of our development process

and Customer's growth.

Continuous rethinking standards provides valuable

insights on how to sue goods around Customer's

expressed or latent needs.

Efficacy oriented and Efficiency driven represent

the goal we set ourselves.

CEO

EXPERIENCE VISIBILITY

The DELTA⁺ presents itself as the solution to visibility issues that every other conventional mixer suffers from. Dead angles which inhibit direct view can affect safety and productivity, delaying return on your investment. The DELTA⁺ addresses this problem with superior visibility.

The cab is integral with a rotating frame. Therefore the operator is in visual contact with drum outlet and bucket assembly through the full 360 degrees. On-ground supervision is kept to a minimum and cycle times are reduced.

Accordingly, —→ cost/m³ decreases
THE DELTA⁺ CONTINUOUS 360°

EXPERIENCE PRODUCTIVITY

The DELTA⁺ presents itself as the solution to productivity and usability issues that every other conventional mixer suffers from.

It is the solution to idle times and cycle-related inefficiencies. Full angle – continuous rotation is intended for active time increase and efficiency enhancement. Experience usability of your DELTA⁺ for loading materials and casting concrete through 360 degrees. Continuously.

EXPERIENCE CERTIFIABILITY

Your DELTA⁺ and the enhanced built-in DAS^{Plus} means measuring and mixing accuracy for guaranteed certifiability time after time. The very new DAS^{Plus}, features an enhanced measurement procedure system. Through strict compliance/adherence with assigned mix design compliance with quality norms is achieved.

EXPERIENCE THE FULL TWIN-JOYSTICK ERGONOMY

The DELTA⁴ presents itself as the solution to discomfort and “hard to operate” user interfaces. Twin joystick and limited toggles are in tune with a smart cockpit design. Zones of reach and comfort both comply with ergonomic norms and best design practice. Command integration confers better control and maneuverability. As a result full in-cab machine control is achieved.

EXPERIENCE CONFIGURABILITY

Customize your DELTA⁴ according to your needs...Conventional bucket or clamshell bucket. Skimmer or on-road- on-rail use. Pressure transducers or load cells for weighing. Alternative environment friendly powertrain solutions and Electric propulsion soon available.

EXPERIENCE STYLE

The DELTA⁺ is simply unconventional, totally unique.

Efficacy and Efficiency are built into a muscular, elegant, tough and refined design. Attention to detail makes the DELTA⁺ extraordinary.

Both interior and exterior are a breakthrough in construction machinery design. We went for lightweight structures whilst still keeping an eye on robustness, durability and reliability.

EXPERIENCE SAFETY AND COMFORT

The DELTA⁺ has been designed with Operator's safety and comfort in mind. Noise and vibrations have been carefully analyzed according to ISO standards and kept to a minimum. Passive and Active protection devices are installed for outstanding safety compliance.

NET OUTPUT (CLASS S1)	4,5 m ³ - 6,0 yd ³
DAILY PRODUCTION UP TO	144m ³ - 188 yd ³
PERKINS ENGINE	83 kW - 113 CV
MAX SPEED	32 km/h - 20 mph
LOADING AND CASTING AREA	All-Around 360°
WEIGHING DEVICE	DAS ^{plus}
